Early and late species are included in suitable proportions so that the productive period may be extended as much as possible.

ANNUAL CANTERBURY BELLS

LIBERTY BELL

The Mixed Annual Canterbury Bells which we had the pleasure of introducing last year and which we now again offer on page 7, proved the most popular Novelty of the year. We are glad to announce that we have been able to segregate a number of separate colors, and take pleasure in offering Liberty Bell, an intense Violet-Blue in color. The type is single and grows from two to two and one-half feet high, each plant having from six to eight spikes of flowers. It flowers in less than six months from the time seed is planted, and is a continuous bloomer until frost. It continues to throw up new spikes even after seed has been set. It is a good cut flower and suitable for pot culture. Annual Canterbury Bells bring spring to the garden in the fall.

Pkt. 25c $\frac{1}{8}$ oz. \$1.25

Sown in February or March, carried along in the open during summer, and again brought inside before frost, it will commence to bloom a year after sowing. The flower resembles a bouvardia in shape, but the color is a brilliant scarlet. It will be found a welcome addition to our winter flowering plants.

Don's Choice Zinnias

The Zinnia is one of the most brilliant, showy and satisfactory of annuals, has long been a general favorite, and is now enjoying a wide popularity, not only for garden decoration, but also for cutting. The seed can be sown early in the hotbed or light window and transplanted, or sown later in the open ground. They come into flower early in the Summer and keep on blooming until frost.

Double Dahlia-Flowered

This grand type of Zinnia is very popular with those who demand a large-flowering strain of high quality. The plants are of strong, vigorous habit, fully 3 feet high, producing mammoth flowers averaging 6 inches across by 3 to 4 inches in depth. The range of colors not only include the usual shades, but many unusual tones, and as the result of continued careful selection, the size, form and colorings have again been greatly improved.

Standard or Tree Roses

These ornamental Tree Roses are useful to relieve the flat appearance of a Rose-garden composed entirely of dwarf bushes, and allow a larger number of varieties to be planted in gardens of limited space. They are less susceptible to mildew and black-spot than dwarfs, and many varieties of the Pernetiana type do better on Standards for that reason. A stake on the sunny side of the stem will act as support and protection from hot sun. The height of these Standards runs from 3 to 3½ feet. \$3.00 each, \$25.00 for 10.

WHITESBOG BLUEBERRIES

The largest varieties grow to three-quarters of an inch or more in diameter, and the general run of the crop is several times as large as average wild berries. In selecting varieties, careful attention has been given to size, but as much care has been given and as much success attained in securing fruit of superlative flavor, fine aroma, and delightful texture. At least two varieties should be included in every planting, as an exchange of pollen is necessary to produce good crops of berries.

Cabot is the earliest variety, beginning to ripen the last week in June. Pioneer, Rancocas, and Concord are mid-season varieties. Rubel, Grover and Jersey are late varieties that ripen 2 or 3 weeks later than Cabot. Berries may be picked from each bush several times at intervals of 5 to 7 days.

Whitesbog Blueberries prefer an acid soil containing an abundance of peat or other partially rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Space the plants about 3 feet apart if planted in a row. Setting the plants in beds 3 feet apart one way and 4 to 5 feet the other way has also been found satisfactory.
